Software Developer (C# / Angular)

April 2021 | Job Reference: 2021/2/SD

About the OMJ

The Oil Market Journal (OMJ) was founded in 1999. We provide oil traders in over 25 countries with oil prices, news and analysis on the Rotterdam, Singapore, London and New York oil markets.

Our customers view & analyse market data using a cloud-based web platform built by an in-house software development team. We use the latest development technologies including .Net Core, Docker, Angular & Ionic – hosted predominantly in Microsoft Azure.

OMJ is a growing & progressive company and as the successful applicant you will join a highly skilled team who are focused on providing top quality products and a first-class service to our diverse customer base.

What you will do

This is a challenging and varied position in our small Software Development / IT team. You will work alongside experienced developers on full stack software development projects, data management, and other aspects of the day-to-day technical operations at OMJ.

- **Software Development** – The role is primarily full stack development work on our backend .NET systems and front-end Angular/Typescript applications for web & mobile; it involves both new project work and bug fix/resolution in existing software.

- **Data Management –** Assisting the IT & Markets teams in managing our growing list of market instruments and data feeds sourced from Exchanges, Brokers and Vendors world-wide. This work requires attention to detail and strong analytical/organisational skills.

- **System Operations & Customer Support** – Assisting with the ongoing operation of OMJ back-end systems and helping customers and non-IT colleagues with installation and support of our front-end applications by telephone or email.

The Oil Market Journal

More about the role

The successful applicant will be based at the OMJ offices in Enniskillen, Co. Fermanagh. This is a full-time position of 37.5 hours per week – office hours are typically 8:30/9:00am to 5:00/5:30pm but flexibility is sometimes required when dealing with customers in other time zones. There may be the opportunity for occasional travel but it is not a key requirement for this role. Salary will be dependent on experience & skillset. Starting date as soon as possible.

Who we're looking for

This position is open to both new graduates and candidates with previous experience. We are looking for a dynamic & enthusiastic person with the following skills / qualifications :

Essential

- A degree level qualification in Computing, Engineering, Maths or other Technology related discipline and/or previous experience in a similar role.
- Experience in writing software with either .NET C# or Typescript/Angular.
- Working knowledge of databases including SQL, Table Storage etc.
- Working knowledge of HTML/CSS/Javascript.
- Excellent interpersonal & communication skills with the ability to work effectively within a team structure and communicate well with clients and other colleagues.
- Strong problem solving, analytical and organisational skills.

Desirable

- Experience building front-end web projects with the Angular framework or similar.
- Experience manipulating and managing data using Microsoft Excel.
- Experience using Microsoft Azure or other cloud platforms.
- Experience using Microsoft Visual Studio or Visual Studio Code development tools.
- A general understanding of and interest in financial markets.
- Examples of personal software projects, websites etc
